- First customercontact 12. March: The customer (Uni Hamburg) explained the general discription of the project and how they want the searchmachine to work.

- Partreport 1 21. March: The customer got a version of our first partraport, to comment on things they want to point out. For example, the costumer now wanted a extendend or advanced search option for the website. It is not clear jet what should be a part of this advanced search, but the customer will specify in a reasonable amount of time. Also they maybe want a dropdown menu, so the website-user can get a quick overview of the entries in the database, this also could be a part of the advanced search.

- Partreport 2/Prototype 21. April: The customer has also got a version of the second partraport, again so they can critizise our current status. Also we presented our first prototype to the customer. The customer approved the current prototype, but pointed the correct order of order, family, genus and species. Also they wanted to add the order-name of an insect to the webpage.
